

Ariel Working Session — Summary & Next Steps

B2B Hub Modernization & CMS Initiative • Phase 1 Prototype Review

Top-Level Summary

Walked Ariel through the latest CMS prototype state. Ariel signed off on most of the structure: segment-led layout, contract reordering, core pages pulled from Jay's mockups, and the full sign-up flow with success, denial, and cross-segment routing. A handful of gaps surfaced — child contract logos, the BDBIT services logo strip, a multi-select role regression, and the logged-out footer — and a clear path was set toward the engineering handoff meeting next week.

CMS Coverage Gaps to Close

Three logo-related gaps emerged. These tie back to a new governing rule: **any logo anywhere on the site must be controlled from the CMS.**

- Child contract logos (e.g., E&I Virginia under E&I parent) need their own CMS-controllable logo slot
- BDBIT services page has a logo strip at the bottom that is not yet wired to the CMS
- Audit pass needed across every page to confirm every logo surface is CMS-driven

Sign-Up Flow

Multi-route landing logic is in place: success, denied, denied-but-fits-other-segment, and denied-but-could-fit-either. PEPPM is confirmed removed; K-12 is split from State & Local. Headers, CTAs, helper text, checkbox copy, and field labels are all CMS-controllable.

New Backend Requirement — Denial Contact Persistence

When a user is denied and clicks **Contact Us**, retain all the info they already provided (business name, tax ID, billing details, etc.) and include it in the outbound contact email. No front-end change required — purely behind-the-scenes data persistence so they do not have to re-enter everything they just submitted.

Role Field Regression

- Multi-select for Role fell off at some point in recent prototype iterations — needs to be restored
- Ariel will get the character-max for role labels from Jay; that number governs 1-column vs. 2-column layout
- Final role list is currently with Jay's intern; we ship with what we have and swap via CMS later

UX Control Philosophy

Both PMs aligned that UX should no longer hold veto power over copy and structure decisions. Prototyping in parallel with design is part of the shift in who owns the end-result experience. Stakeholders, product, and engineering should be able to drive copy and behavior via CMS.

Footer Cleanup (Logged-Out B2B Footer)

The logged-out footer currently inherits B2C content. It needs B2B-specific contact info and a cleanup pass on the "Other B&H Sites" list. Target: design from Jay by Tuesday so changes can land without trauma.

Updates Required

- **Customer service number** → B2B-specific
- **Sales / expert advice number** → B2B-specific
- **All contact channels** (callback, etc.) → route to B2B-specific endpoints
- **Remove Federal Marketplace** from "Other B&H Sites"
- **Remove B2B Corp / Gov / EDU** (redundant with current site)
- **Remove Live Chat** — B2B does not offer live chat; current copy is misleading
- **Keep Student Advantage and Request Callback**
- UX may want to add 1–2 entries (consumer site, etc.) for visual balance

Marketing Copy Fix

"5-Minute Contract Approval" — Misleading

Current wording implies anyone who signs up gets a contract. Change to "**Registration Approval**" or "**Registration Review**" — still under 5 minutes, but accurately reflects that approval is conditional. Ariel will flag any similar phrasing she sees.

PMO 5000 — Domain-Based Routing

Present domain-sniffing (e.g., a Disney email routes the user straight to their portal, bypassing the standard sign-up) as part of PMO 5000. Mild pushback from Ephraim is expected on scope; this is a hill worth defending. Net terms / tax exemption lookup stays as a separate concurrent item.

Meetings Booked

Tuesday, May 13 • Prototype Finalization + Pre-Grooming

When: 11:30 AM – 12:30 PM

Where: Room 9C

Attendees: Mr. Smith, Ariel (locked in); Jay (informally invited — open calendar)

Focus: Scenarios; try to break the prototype; identify limitations before documentation dump

Engineering Handoff Meeting

When: 2:00 PM (only available slot on a week's notice)

Where: Room 4A

Attendees: Ariel, Shia, Brendan, Ephraim, Lefkowitz, Hiller, Porgesz, Herman (in case BDBTools-routing comes up)

Focus: Review updated PRD, technical architecture, prototype, and Jay's Figma. The ask is *how* to build this — not *whether* to trim features.

Action Items

Mr. Smith

#	Action
1	Add CMS support for child contract logos
2	Wire BDBIT services page logo strip to CMS
3	Restore role multi-select (regression fix)
4	Add written requirement for denial-flow data persistence into contact email
5	Apply footer updates listed above once Jay delivers the design
6	Update "5-minute contract approval" copy to "Registration approval / review"
7	Send Ariel an updated outstanding-items list reflecting today's answers
8	After Tuesday: regenerate PRD, tech architecture, user stories, and Gherkin scenarios for Thursday handoff
9	Build out scenarios for Tuesday's prototype-breaking session
10	Present domain-based routing as part of PMO 5000 in the handoff meeting

Ariel

#	Action
1	Get character-max for role labels from Jay (governs 1- vs. 2-column layout)
2	Review Jay's footer design when it lands (target: by Tuesday)
3	Flag any other "5-minute approval"-style copy issues while digging into the prototype

Waiting on Jay

#	Action
1	Footer design by Tuesday (so Wednesday changes do not become traumatic)
2	Role label character cap
3	Final role list (intern-owned)
